SPECIFICATION

WONDERGLASS

PARHELIA

by atelier oï

WONDERGLASS

Often called sun dogs or mock suns, parhelia are atmospheric optical phenomena comprising a bright spot flanking one or both sides of the Sun, and are caused by the refraction of light in airborne ice crystals. Parhelia by atelier oï takes an original glass form and subdivides it into inverted segments. Mobile light elements above replicate the curious parhelic circle light effects – halos – which have long confounded meteorologists, philosophers and poets for centuries.

Numbered edition.

Parhelia is sold as an installation only.

For future production, atelier oï will develop a bespoke creative proposal.

MATERIALS

Cast glass

DIMENSIONS

100 x 100 x H 210 MM

The composition consists of 4 pieces.

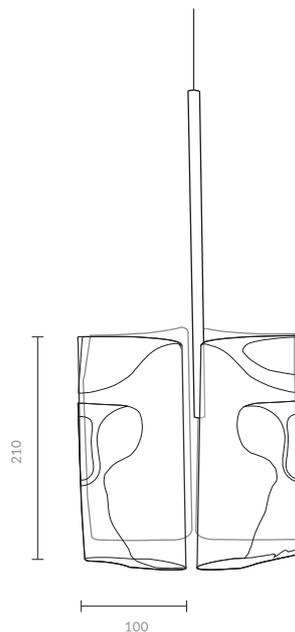

LIGHT FITTING

The lighting system for Parhelia is developed by atelier oï expressly for Gaïa Collection and is produced by WonderGlass solely for these models.
